TOUCH SCREEN EVOLUTION

Controls present at Bauma new machines for concrete and cement. The Automax E-Modulus represents the ideal control system to automatically perform with required accuracy and superior productivity. This system is on display at the fair with 3000 kN high stiffness

4 columns welded frame with EN heavy duty spherical seat in oil bath. Another peculiar **Controls** is the new Automatic digital mortar mixer 65-L0512, 5 l capacity, features a pre-defined procedure according to Standard allowing manual introduction of sand by the

top filling hopper. The sample prepared by the automatic mixer can then be tested for the setting time and consistency determination by the recent Vicamatic2, designed using the latest developments in electronic technology, includes a color touch-screen display and makes possible the creation of a network with up to 32 independent units all controlled by a single PC.

ITALIAN CRAWLER CRANE

At Bauma 2016, Soilmec presents the new SC-120 HD, a duty cycle crawler crane equipped with the hydraulic rotary SA-40 for bored piles construction. The SC-120 HD is the successor of the proven SC-120, and compared with this last model, it improves the overall performances, thanks to a new power pack, the use of closed circuit pumps and the advance generation of DMS control

system, which monitors the state of the machine and offers a dedicated software package for each technology.

The **Soilmec** SC-120 HD frame shows a robust design necessary for HD operations, and, at the same time, can be easily transported, with a transport weight under 48 t and a transport width at 3.5 m. The benefits of the SC-120 HD with the SA-40 have been already confirmed in the job site, where one SC-120 HD is drilling piles of 3 m diameter at 80 m depth.
