SOILMEC

# Focus on products and human relationships

Soilmec presents itself at bauma 2025 with an exhibition that aims to return to the core of its business, focusing on products and human relationships. Maintaining the same position as the previous edition (FN521/9, in the outdoor area dedicated to drillers), Soilmec presents a new stand, a covered area of 375 sqm, characterized by a large open space where relationships can be strengthened, Italian gastronomy can be enjoyed, and products and technologies can be discussed. Several offices and a spacious meeting room complete the stand's facilities.

In the outdoor area, it will be possible to appreciate the machines on display

while comfortably seated in a small covered pavilion or walking among the exhibited machines. Soilmec will showcase three main product lines: SC, SR, and SM. Innovation and technology will be presented within the machines and in the "controls" area, characterized by the mobile training classroom, where it will be possible to try the SR machine simulator and the latest DMS developments.

## SC Line

The SC line, dedicated to "heavy-duty cranes," has seen significant developments in recent years. These advancements have materialized

with the construction of the new Tiger line hydromill, the SC-110 Urban, and the development of the SC-130 HD, equipped with various technological setups that make it a multifunctional heavy-duty crane. The SC-130 HD will be represented at the fair in Dynamic Compaction configuration, with a lifting capacity of 130 tons and a heavy-duty application capacity of 53 tons.

## SM Line

The Soilmec micropile machine line will be represented at the fair by three models: SM-11, SM-18, and SM-22. These multifunctional machines offer excellent performance in all major micropile, tie rod, and soil consolidation technologies. The SM-11 is characterized by versatility and compactness, the SM-18 is a historic machine renewed with ad hoc improvements, and the SM-22 is the most powerful micropile machine from Soilmec.

## SR Line

The SR line represents the flagship of Soilmec, with multifunctional hydraulic drilling rigs capable of performing all major large-diameter pile and deep Soil Mixing technologies. The range will be represented at Bauma by two models of the Blue Tech line: the SR-95 and the SR-65. Additionally, the new Blue Tech Plus technology will be revealed.

## Innovation and Controls

In the Controls area, it will be possible to discover and experience the latest innovations of the DMS Suite, including the SR machine simulator, J-Eye cameras with Artificial Intelligence for person detection, and the Smart Maintenance system for monitoring the health status of components. ■
